

Pakistan's solar boom, mapped building by building

6,064

MWp — recall-corrected, all PV

90% credible band 5,034 – 8,239 MWp

92,953

individual buildings carrying detected PV, plotted at full resolution

PROVINCES, RANKED

Model reads a year of Sentinel-2 L2A imagery and marks pixels that look like photovoltaic panels; area is calibrated by measured P(real | size, glint) against OSM mapping and a country-wide glint-corroboration study, then divided by measured per-size recall for the whole detectable population.

earthpv density stage - indicative estimate for energy-system modelling, not metered capacity
